# Event Manager

## For Theatre Complex Monitoring and Control

**The INTEG Cinema Event Manager software program allows theatres to monitor and control all of their auditoriums in a complex from anywhere in the building.**

The system is easy to use and works with existing JNIOR Model 310/312 automation controllers utilized in existing digital cinema installations. If you do not have the JNIOR, you can install one in each auditorium to interact with your current automation system.

Event Manager requires the installation of one central JNIOR Model 410 – our new powerful, cinema automation controller capable of receiving data and interacting with up to 25 JNIORs (25 auditoriums). With an advanced web server, the JNIOR 410 can serve up web pages to any device on the theatre network running a modern web browser. This includes flat panel displays, PCs, tablets (iPads, etc.), and smart phones (iPhones, Androids, Blackberrys). From the displays, the user can view the auditorium status and trigger macros to adjust the set-up as needed.

**Trigger Macros to Control Each Auditorium from Any Device!**

Execute Macros for Auditorium-02

| | |
|---|---|
| Preshow Start | Shorten Intermission 15 Seconds |
| Preshow End | Intermission End |
| Flat Start Trailers | Fire Alarm |
| Scope Start Trailers | Fire Alarm Clear |
| Feature Start | Lights Dim |
| Feature Credits | Lights Half |
| Feature End | Lights Full |
| Start Intermission | Multiple |
| Stop Intermission | serial test |
| Extend Intermission 15 Seconds | |

Open in New Window     Close

PCs, Displays

Wireless Devices, Phones, Tablets

**Integrate up to 25 Auditoriums!**
